1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/23/05 has been entered.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1, , 6-7, 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear whether the claims intend to recite a circuit device or if limitations regarding the circuit device are statements of intended use. Since Applicant has received an action on the merits to the laminate support but not to the combination of the laminate support and a circuit device, it will be assumed for purposes of the art rejection, that the limitations regarding the circuit device are statements of intended use.
4. Claims 1,6,-7, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 11-107,112 for the reasons set forth in paragraph 3 of the previous action.
5. Applicant's arguments filed 6/23/05 have been fully considered but they are not persuasive.
6. Applicant argues that the instant invention is not concerned with expansion or contraction or dimensional control but rather is concerned with collapse of a pad on the

Art Unit: 1771

surface of a board during a wire bonding process. However, JP '112 teaches optimizing the spacing the fibers in the weave in order to form a fabric having the desired strength. JP '112 teaches optimizing the weave density by making the spacing between the adjacent strands small so as to increase the accuracy and efficiency of circuit boards which employ the fiber glass cloths. Therefore, JP '112 teaches that the weave density is a result effective variable. This teaching would seem to be relevant to prevention of collapse as well as to the control of the expansion and contraction of the fabric during use.

7. Applicant argues that the JP '112 structure is not capable of preventing collapse and that the claimed dimensions are critical. However, Applicant has not set forth any evidence showing the criticality of the claimed dimensions.

8. Applicant's amendment has overcome the 112 2nd rejection by deleting the term "essentially" from claim 1.
